Description			
Hello.			
I was trying to reply here, but I am receiving "internal error": http://www.redmine.org/boards/1/topics/36216			
I am very interested in that plugin. I created a WordPress site using https://themesgenerator.com/ and I would like to integrate it with Redmine.			
Do you know if there is any paid or free plugin?			
Thank you very much for your help!
