### History

#### #1 - 2009-05-15 22:42 - Mischa The Evil

Partly duplicates issue [#1740](#) (which is patched in [#2132](#))...

#### #2 - 2009-05-18 22:42 - Mischa The Evil

- Subject changed from *Bloked or Folving Issiues* to *Blocked or Following Issues*

- Priority changed from *Urgent* to *Normal*

Corrected spelling and priority... ;)

#### #3 - 2009-07-04 14:07 - Jean-Philippe Lang

Partially implemented in [r2800](#).

Not sure if an open predecessor should block issue from being closed.

#### #4 - 2009-07-05 23:41 - Mischa The Evil

- Category set to *Issues*

- % Done changed from *0* to *50*

Not sure if an open predecessor should block issue from being closed.

IMHO open predecessors should not block issues from being closed. Imagine a case where we have two issues:

- an issue (issue [#2](#)) which relies on a function which is implemented in issue [#1](#) (therefore the issue is preceded by issue [#1](#))
- the predecessor (issue [#1](#)) which implements a new function.

If the following state is true than open predecessors should not block issues:

Issue [#2](#) is fully implemented but only the documentation needs to be completed. In that case the issue -done *can be set* to 90. The actual function **is** implemented though thus the predeccessing issue (issue [#1](#)) (which is preceded by this issue ) should be closeable at this stage.

I guess this is something that can depend on everyone's individual workflow. My opinion is that Redmine should be kept as flexible as possible. Therefore I'd say to keep actual issue-blocking a feature of the blocking issue-relation only. Though, YMMV...

#### #5 - 2009-07-06 09:10 - Serkan Bayhan

- % Done changed from *50* to *30*

It would be great for us if an issue can be marked to be closed conditionally. For example blockers must be closed or certain %-done level is reached for each related issue or all, there may be some restrictions and of course this feature can be toggled (on/off) from projects settings and/or system

wise settings.

And it would be great if some checklist for issues and categories. We can check/uncheck standart procedures and each check determines the progress of issue and %-done level.

Example:

```
Issue #xxx:
Stereotype: YYYY
[OK] Todo blah blah 1 (%30)
[..] Todo blah blah 2 (%10)
  [ ] Todo blah blah 3 (%50)
    [OK] Todo blah blah 4 (%50)
  [ ] Todo blah blah (%10)
[OK] Todo blah blah (%50)

Done: 85% (30% + (50% of 10%) + %50)
```

#### #6 - 2013-03-22 16:37 - Dipan Mehta

As of now - the blocked by issues are not allowed to be closed till the corresponding issues are not closed. This shouldn't be applied, in my opinion, to precede or other relations.

Is this the end goal? or there is something still more to it?
