Description

To make RedMine an effective Enterprise application it needs to have non-file based sessions.

It would be beneficial to enable database sessions using the

```
rake db:sessions:create
```

command.

History

I agree with this feature for use active_record session storage.

#2 - 2010-05-16 15:22 - Felix Schäfer

- Status changed from New to Closed

Current redmine uses cookie session store, which scales as well as the DB store and seems to be enough for now.
