Redmine - Defect #4253

Formatting errors in <code> block

2009-11-20 07:29 - Aleksej Lebedev

Status:	Closed		**Start date:**	2009-11-20
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Text formatting		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Fixed		**Affected version:**	

Description

In block characters < and > are replaced with HTML entities. Example:

```
<pre><code class="html">
<embed src="/upload/banners/{$page_razdel}/{$key}.swf" width="498" height="70"
  type="application/x-shockwave-flash"
  pluginspage="http://www.macromedia.com/go/getflashplayer"></embed>
</code></pre>

<pre><code class="xml">
    <web>
        <host value="http://${admin_host::domain}/business/admin/" />
        <static_host value="${admin_host::web::host}static/" />
        <img_dir value="${admin_host::web::static_host}images/" />
        <css_dir value="${admin_host::web::static_host}css/" />
        <js_dir value="${admin_host::web::static_host}js/" />
        <upload_dir value="${admin_host::web::host}upload/" />
    </web>
</code></pre>

<pre><code class="php"><?php
$go_page = "onClick=\"return dropdownmenu(this, event, UserMenu('".htmlspecialchars($go_page)."',
'".$row['user_id']."', '".$member_id['user_group']."'), '170px')\" onMouseout=\"delayhidemenu()\""
;

if ($config['allow_alt_url'] == "yes") {
    $tpl->set('{author}', "<a {$go_page} href=\"".$config['http_home_url']."user/".urlencode($row[
'name'])."/\">".$row['name']."</a>");
} else {
    $tpl->set('{author}', "<a {$go_page} href=\"$PHP_SELF?sa=userinfo&amp;user=".urlencode($row['n
ame'])."\">".$row['name']."</a>");
}

?></code></pre>
```

Result:

code_error.png

Without works fine.

History

#1 - 2009-11-20 11:33 - Henrik Ammer

Same here, just noted it when I added my own bug some seconds ago.

Seems like a Textile bug to me. I know that the [Textileversion in PHP](#) has even added a bc. for a block of code and even a bc.. if there are alot of newlines in it.

> Related to [#4243](#)?

Probably not, because the formatting does not work everywhere (in wiki, issues, comments, etc.)

I know Ruby is very bad, but looking at [source:/trunk/lib/redmine/wiki_formatting/textile/formatter.rb@2824#L58](#) problem is probably in the wrong use of the method html, because :escape param does not exist in [source:/trunk/vendor/plugins/coderay-0.9.0/lib/coderay/encoders/html.rb@3014](#).

Most likely, this problem appeared after updating coderay to version 0.9.0, because in [r2838](#) everything worked (coderay was updated in [r3014](#)).

#4 - 2009-11-20 16:45 - Jean-Philippe Lang

- Category set to Text formatting

- Status changed from New to Closed

- Resolution set to Fixed

Coderay upgrade reverted in [r3079](#). Got lots of errors when parsing ruby source files.

#5 - 2009-11-20 17:30 - Aleksej Lebedev

- Status changed from Closed to Reopened

Maybe the best solution is simply to replace <, >, etc. back to the characters?
(As I understand it was made in [source:/trunk/vendor/plugins/coderay-0.9.0/lib/coderay/for_redcloth.rb@3076](#))

#6 - 2009-11-20 18:37 - Jean-Philippe Lang

- Status changed from Reopened to Closed

As I said, I got many errors on redmine.org with coderay 0.9.
So this is not an option.

#7 - 2009-11-22 16:35 - Mischa The Evil

Jean-Philippe,

Please see issue [#3359](#) for a dedicated issue regarding updating the CodeRay library.

Kind regards,

Mischa.
