Redmine - Patch #4262

Bazaar: correct renames handling, other improvements

2009-11-22 00:43 - Ivan Korotkov

Status:	New		**Start date:**	2009-11-22
Priority:	High		**Due date:**

Target version:				

Description

This patch fixes some problems with Bazaar adapter, namely:

- Renames shown correctly (past behaviour was: show as modified);
- History doesn't stop on first entry rename (uses internal object ids to retrieve changes);
- Last revision the entry was changed in displayed correctly (past behaviour was: sort alphabetically, i.e. if object was changed in 2, 9, 13, then 9 would be shown);
- Field tags changed a little to make it clear to user that he can either enter local path to branch repo or http:// URL.
- Bazaar adapter uses change.revision to store internal object ids which are pretty long, not revision number. So when viewing repository/revisions/:id, these long ids are shown **after** diff link, not before it (more convenient for bazaar, doesn't change anything for other SCMs).

Patch created against r3083.

History

#1 - 2009-11-22 00:54 - Ivan Korotkov

- File bzr-fixes.patch added

Fixed stupid typo in patch, sorry.

#2 - 2009-12-24 13:37 - Ivan Korotkov

- File bzr-fixes-r3235.patch added

I decided to remove internal bazaar object ids from revision view (repository/revisions/:id) at all, because they are actually never needed and tend to block the view. Taken against r3235.

Month passed since this patch was added. Seems that no-one is interested in **Bazaar** support for Redmine?

#3 - 2010-03-06 20:45 - Antti Kaijanmäki

There are people interested in Bazaar support for Redmine, at least I am. ;)

I'm sure this will be merged when some developer has the time to do it.

#4 - 2012-09-27 20:35 - David LeBauer

- Assignee set to Ivan Korotkov

would this be resolved by a feature like #5501, which tracks merge/branch history in repository view?
