Description

Now it is possible to have a link leading to a paragraph in the same page. It would be useful to have the ability to add links that leads to a specified paragraph in the different wiki page. For example, I have two wiki pages, A and B that looks like this:

A:
h1. paragraph-A1
... text ...
h2. paragraph-A2
... more text...
h1. paragraph-A3
... etc.

B:
h1. paragraph-B1
... text ...
h2. paragraph-B2
... more text...
h2. paragraph-B3
... etc.

I would like to have a link to paragraph-B2 within paragraph-A1.

Did you try:

```
![[Plugin_List#Hide-Emails-by-Default|link to a paragraph of a wiki page]]
```

which gives:

[link to a paragraph of a wiki page](#)

I have attempted to use this notation many times and have been unsuccessful in getting it to work. Does it still function in Redmine 2.2.3? Are there any special caveats to the paragraph names? What if you are referencing a paragraph on the same wiki page? Thanks.
