Redmine - Defect #4431

Non-admin user cannot create project :for revision 3174

2009-12-17 11:30 - TK Lew

Status:	Closed		**Start date:**	2009-12-17
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Accounts / authentication		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Invalid		**Affected version:**	

Description

- Updated to revision 3174 from r3076
- Non-admin user cannot create new project as there is no icon "+New Project" when the non-admin new user logged in.
- it is working in r3076

Thank you.

History

#1 - 2009-12-17 21:05 - Jean-Philippe Lang

Can not reproduce with latest trunk.
A non admin user with "create project" permission can see the "new project" link on the project list.

#2 - 2010-01-07 05:15 - Oregon State University Central Web Services

It happens when the user in the appropriate role to create a project does not belong to a project.
For example, we set the manager permission to be able to create projects and subprojects.
User foo is created, and given the role as a manager, but not assigned to a group with projects or to any project individually.

foo logs in, does not see the "New project". If foo is subsequently added to a project with a role of manager, then foo is able to create projects.

It seems if a role is given the authority to create a project, it should be independent of if they belong to a project or not.

A role is given to a user for a given project. So you can not give a role to a user that doesn't belong to any project.

If you want users that doesn't belong to a project to be able to create project, you have to give the 'Create project' permission to the 'Non member' role.
