Description

```
------------------------------------
About my application's environment
Ruby version            1.8.6 (x86_64-linux)
RubyGems version        1.3.5
Rails version           2.1.2
Active Record version   2.1.2
Action Pack version     2.1.2
Active Resource version   2.1.2
Action Mailer version   2.1.2
Active Support version   2.1.2
Edge Rails revision     unknown
Application root        /var/www/html/redmine-0.8.4
Environment             development
Database adapter        mysql
-------------------------------------------------------
```

On the Admin page, it would be great to have user group as an option.
That way, one can sort users in to groups and add user groups to projects and sub-projects instead of individual users.
It will immensely ease administration when adding/maintaining a big list of members belonging to different departments.
However, the project setting should eventually list its members individually, just in case a particular user needs to be removed from a project but be maintained in the group he/she belongs to.
Similarly, role assignment should be given to group while modification at individual level.
