

Redmine - Defect #4503

unable to browse git repositories since move to 0.9

2009-12-29 13:08 - Nicolas Sebrecht

Status: Closed	Start date: 2009-12-29
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	Affected version:
Resolution: Invalid	

Description

Nobody can browse Git repositories since the migration from last stable to 0.9.
Error message: "The entry or revision was not found in the repository."

The commands:

```
RAILS_ENV=production rake db:migrate
RAILS_ENV=production rake db:migrate_plugins
RAILS_ENV=production rake db:migrate:upgrade_plugin_migrations
rake tmp:cache:clear
rake tmp:sessions:clear
```

didn't help.

Current version:

```
commit e0b97823d89c89e496a39cc6b61818fd8a8a8b6e
Author: Jean-Philippe Lang <jp_lang@yahoo.fr>
Date: Sun Dec 27 10:52:02 2009 +0000
```

```
Moves attachments parsing after textile parsing so that:
* attachments parsing does not rely on textile syntax
* textile output can be cached (#4482)
```

```
git-svn-id: svn+ssh://rubyforge.org/var/svn/redmine/trunk@3253 e93f8b46-1217-0410-a6f0-8f06a7374b81
```

History

#1 - 2010-01-07 15:31 - Nicolas Sebrecht

- File *test-server.report* added

Added output from:

```
ruby script/server webrick -e production
```

#2 - 2010-01-10 15:09 - Jean-Philippe Lang

[...]

No connection to the database.

#3 - 2010-01-10 18:40 - Nicolas Sebrecht

I've checked the user/database/password informations in config/database.yml and they are correct.

Manually connecting to mysql works ('mysql -u "user" -p') and the command 'show databases;' print out the good database name. Issues functionality works fine.

We can browse the repositories if I set 'chmod -R 777' on the repos.

Today, we have :

```
serveur git-repositories # ls -ld redmine.git
drwxrwx--- 7 redmine admin-git 4,0K 2009-12-29 12:58 redmine.git
```

"admin-git" is a ldap group for the maintainers of the project.
"redmine" is a classic unix system user.

I can't keep read access to others because all of the hosted projects aren't public ('git clone' would be permitted).

Is it normal?

#5 - 2010-01-25 13:36 - Rob Sterner

The 'chmod -R 777 *' trick didn't work for me. I'm still unable to browse git repositories after following the setup instructions.

#6 - 2010-02-02 10:46 - Anton Statutov

The same problem for me with 0.9.1.

#7 - 2010-02-04 17:10 - Anton Statutov

Someone could tell me how to debug it?

#8 - 2010-03-23 16:20 - Anton Statutov

The problem still not solved for me. But I found in apache logs some info:

```
fatal: Not a git repository: '/home/user/project.git/'
```

Nevertheless, the following command works fine:

```
git --git-dir /home/user/project.git/ log
```

#9 - 2010-03-23 16:44 - Anton Statutov

- Status changed from New to Resolved

The problem was in that redmine works with apache user privileges and www was not able to see git directory.

#10 - 2010-07-09 16:03 - Felix Schäfer

- Status changed from Resolved to Closed

- Resolution set to Invalid
