

## Redmine - Feature #4550

### Allow access to files & documents to be configurable for each entry by user role

2010-01-11 22:55 - Eric Hollering

<b>Status:</b>	New	<b>Start date:</b>	2010-01-11

<b>Target version:</b>			
<b>Resolution:</b>			
<b>Description</b>			
<p>It would be very beneficial to be able to establish who can and cannot view or otherwise access uploaded documents and files based on their role(s).</p> <p>For instance, I would like to manage my user documentation and administrative documentation for each project. But the administrative documentation often has information that should not be made accessible to my general users.</p> <p>As a workaround, I can create a new sub-project with a subset of members to house the more sensitive documentation, but it would be great if this step was unnecessary.</p> <p>The same is true for files. If I generate an Excel dashboard that contains sensitive information, I have to either track it outside of Redmine or create a sub-project just to house a file or two.</p> <p>As an aside, the same logic holds true for many things, but I saw that there was already a suggestion for issue permissions, and I think there is already a plugin for Wiki-specific permissions.</p>

+1 ! This is a must-have feature for organizations that need to share documentation to different levels (managers-onlyreports, technical stuff, client-ready docs...)
