Redmine - Feature #4702

Comment/close tickets from other projects' repository commit messages

2010-01-31 12:46 - Paul Adler

Target version:				
Resolution:	Duplicate			

Description

Just starting to use Redmine, I noticed two issues with my particular setup:

1. "refs #123" and "closes #123" in a commit message don't trigger the intended actions before the repository is visited. This is unfortunate and already noted in #1274 - basically the only place to learn about this behavior!?
2. It is obviously not possible to comment/close a ticket that belongs to a different project. 'Different' means that the changeset with the commit message goes to a repository associated with a project different from that where the ticket was filed against.

I use a "master project" with several subprojects to have a common ticket space. Problems are solved in several subprojects that each have a mercurial repository associated. The idea is to have a developer use a commit message to trigger an action for a ticket filed against the "master project".

This is described in the FAQ.

> 1. It is obviously not possible to comment/close a ticket that belongs to a different project. 'Different' means that the changeset with the commit message goes to a repository associated with a project different from that where the ticket was filed against.

Fixed in r3357, see #4674.
