| Description |
|---|
| following #1554 and #337, it appears usefull to think about some private fields (I'd better like ACL-controlled fields than only public/private flag :)) |
| NB: I was sure i saw it as a request a long time ago, but I can not find it again. surry if this is a dup |

## History

**#1 - 2011-09-20 12:01 - Laurent Dairaine**

It could be also useful to get fields appearing in the ticket depending on the ticket state.

**#2 - 2012-10-12 10:13 - Anton Nepomnyaschih**

This is duplicate of #11329.

**#3 - 2012-11-22 11:29 - Daniel Felix**

*- Category set to Issues workflow*

Well, this one seems to be solved by #8050 and #12005.

You can define some workflow, where some role has write or just read rights, even for custome fields (#8050). Additionally, you can define if these custom field is visible or just hidden (#12005).

Is this an implementation, which fits your needs? If see, please give feedback and this Ticket could be closed.
