

Redmine - Feature #4877

Reposman.rb autocreate SVN default directories

2010-02-18 18:12 - Bruno Prado

Status:	New	Start date:	2010-02-18
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM extra	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description			
<p>In my company, as we use only SVN, we modified reposman.rb so it creates the three default folders - tags, braches, trunk - as it's executed, so the structure created doesn't increment the revision. Here's the modification:</p> <pre>101 \$autodir = ["trunk", "tags", "branches"] 288 scm_module.create(repos_path) 289 raise "svn mkdir #{\$svn_url}#{project.identifier}/#{autodir.at(0)} #{\$svn_url}#{project.identifier}/#{autodir.at(1)} #{\$svn_url}#{project.identifier}/#{autodir.at(2)} failed" unless system("svn", "mkdir", \$svn_url+project.identifier+"/"+autodir.at(0), \$svn_url+project.identifier+"/"+autodir.at(1), \$svn_url+project.identifier+"/"+autodir.at(2), "-m \"Autocreate #{autodir.at(1)}\"") 290 log("\tcreating directory for repository #{repos_path}: ");</pre>			

History

#1 - 2010-02-19 19:56 - Jean-Philippe Lang

- Category set to SCM
