Target version:		Affected version:	0.9.1
Resolution:	Invalid		

Description

I can't use mnogosearch search engine with Redmine bacause Redmine puts documents in urls like:

http://myserver/redmine/attachments/*+2+*/myfile.pdf

This numeber (2) is a problem bacause in not a real directory, but is added by Redmine, so if I use this nmogosearch rule:

Server <http://muserver/redmine/documents/> file:///var/lib/redmine/default/files/

in the search results I find:

http://myserver/redmine/documents/091103113553_myfile.pdf

In other words: the missing match between the filesystem path and the url generated cause such search engines to be useless.

Or maybe is my mistake because I do that in the wrong way?

History

#1 - 2010-02-19 19:13 - Jean-Philippe Lang

- Status changed from New to Closed
- Resolution set to Invalid

The number is not a problem, it's the document id.
But you can setup a simple Alias in your apache configuration. Something like:

Alias /redmine/docs /var/lib/redmine/default/files/
