Redmine - Feature #5576

Have Category searches work for subprojects

Description

With a project structure like

- A
    - Sub1
    - Sub2

If I have a saved search in A that is all open tickets where category is "Marketing" it only finds open tickets in A that are in Marketing even if I add the subproject = all option.

I'd like to be able to search all the subrojects by category name too. I can do it subproject by subroject but that isn't convenient.

I think this is because the top level category is a different category id than the same named category in subcategories. I think you'd have to change categories to be redmine wide rather than specific to a project for this to work.
