<b>Description</b> Hello,  I'm running redmine with Hebrew translation and Rtl theme. PDF export doesn't work at all (HTTP 500).  I created <a href="#">an issue with Hebrew</a> text on the demo redmine, and exported it to PDF. The Hebrew <a href="#">became gibberish</a> .

#### History

##### #1 - 2010-07-15 11:55 - Orgad Shaneh

On my server, even CSV doesn't work - only Atom...

Ok, it has nothing to do with the Rtl theme. Apparently, the encoding specified in he.yml (ISO-8859-8-I) is not supported in iconv, so it crashes... It should be changed to ISO-8859-8. Still, it can't show Hebrew characters, because the used font is not in the correct encoding, and even if it would have been, it would display it reversed.

Following issue [#61](#), I was able to produce a PDF with Hebrew characters using UTF-8, but it is reversed. Is there any way to define the PDF as RTL?
