**Description**

I tried fresh install into my VM guest (Ubuntu 10.04), and I cannot login as default administrator account named "admin".

I checked my db after initialized at 1st time, no admin account created. there is just only "Anonymous" account exist.

Here is my environment

- Ruby 1.8.7
- Rails 2.3.5
- PostgreSQL 8.4.4

#### History

##### #1 - 2010-07-19 00:09 - Sin-young Kang

ah, I missed Redmine version.

It is just fresh 1.0.0 RC, [r3858](#).

##### #2 - 2010-07-19 08:10 - Felix Schäfer

Have you run `RAILS_ENV=production rake redmine:load_default_data?`

Sure. I tried clean install almost 10 times. Currently I'm on working so I'll try again after work.

And it looks also 0.9-stable affecting, I'll test it too.

##### #4 - 2010-07-19 10:20 - Felix Schäfer

The admin account is created in the migrations, sorry, in fact it's created in the first migration here [source:trunk/db/migrate/001\\_setup.rb#L288](#). Could you try a fresh install on SQLite to see if the problem persists? Do you also have gems installed from apt? There are known problems with gems installed both from apt and manually colliding.

There is no problem, sorry about wrong error.

In my fault, I used `rake db:reset` instead `rake db:migrate`, `schema dump` doesn't has custom insert syntaxes.

I dropped my postgresql database again, and now good with `rake db:migrate`.

- *Status changed from New to Closed*

- *Resolution set to Invalid*

No harm done :-)
