Target version:			
Resolution:	Duplicate		
Description			
<p>It would be pretty need if we were able to highlight any relevant code we want to while viewing files in the repository browser (thus covering the original, and annotate views)</p> <p>Usage example: Say I encountered a bug, say that I know what lines are causing the problems, and (if applicable) what revision the problem I'm using, however I'm just a normal user, I can't commit or anything, I may not even know how to fix it, but I can write an issue report, and I can tell them what the problem is. So I link to the repository browsers file view (file view or annotate works fine), and link to "#L54", the line the problematic code is in.</p> <p>That's ok in theory, but wouldn't it be easier instead of having to mention in my bug report that the problem is line 54-69, why can't I just append something to the URL like.. ".../repository/entry annotate/trunk/file.rb?h=54-69#L54"</p> <p>Now my URL example may not be the best for how you guys would like to implement such a feature, but the URL is only one way that I have figured would be the easiest to do such a thing, and you're free to make suggestions/change it as long as it maintains functionality. You get the picture, and I'm sure this wouldn't be way too hard to accomplish either. (:</p>
