

Redmine - Patch #6414

Added FLAG to Redmine.pm to AllowAlternateAuth methods on apache

2010-09-16 13:23 - Sergio Talens-Oliag

Status:	New	Start date:	2010-09-16
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM extra	Estimated time:	0.00 hour
Target version:			
Description			
<p>I want to use Redmine.pm to authenticate users when accessing subversion, but I also want to be able to authenticate non-Redmine users.</p> <p>To be able to do it I've added an additional flag to the Redmine.pm module to allow the use of multiple authentication methods.</p> <p>The name of the flag (RedmineAllowAlternateAuth) has been taken from the variable used on the Apache2::AuthNetLDAP and Apache2::AuthenNIS modules that is used for the same purpose.</p> <p>The attached patch is against an export of the redmine-1.0.1 tag.</p>
