

## Redmine - Patch #6475

### Add an option to set the project name from apache when authenticating with Redmine.pm

2010-09-23 14:08 - Sergio Talens-Oliag

<b>Status:</b>	New	<b>Start date:</b>	2010-09-23

<b>Target version:</b>			
<b>Description</b>			
<p>I have some repositories that are configured with SVNPath instead of SVNParentPath (I'm doing it to be able to use additional authentication methods them, see issue <a href="#">#6414</a>).</p> <p>With the current Redmine.pm code (1.0.1) the authentication against Redmine fails because the project_id is not guessed as it should (the apache Location points to the repository, not to it's parent path).</p> <p>To solve the problem I've patched Redmine.pm to allow the use of a new option that adjusts the project_id to use; if the option is set the get_project_identifier function returns that name instead of calculating it from the URI and the apache location).</p> <p>The attached patch is against an export of the redmine-1.0.1 tag.</p>			

#### History

##### #1 - 2010-09-23 14:10 - Sergio Talens-Oliag

- File Redmine.pm-Get\_project\_id\_from\_apache.diff added
