Description			
I am using the Watched Issues block on My Page and I find it very useful			
I would however like very much to be able to unwatch issue from this interface without opening the whole issue. Many of my watched issues for example get closed/completed and I do not need to watch them anymore. Now I open issue by issue and remove myself from watchers list but sometimes this takes a lot of time (for instance after deploys).			
This interface would be a more quicker way to cleanup			

History

In recent versions, you can right click on the issue row from 'my page' to unwatch the issue.
Note that you'll have to refresh the page to update the 'watched issues' list.

Thank you I never realized I already have this ability :)

I use Opera for browsing and the right-click menu does not work at all. It works however in Firefox so I guess I will need to switch my favorite browser :/ or is there an initiative to make this popup menu working in Opera as well ?

- Status changed from New to Resolved
- % Done changed from 0 to 100

It seems be resolved. I'm closing ;?)

- Status changed from Resolved to Closed

Indeed. Btw, the right-click menu is fixed for recent Opera versions.
