

Redmine - Feature #6880

Parent task displays sub task estimated time

2010-11-12 17:51 - Vincent Frédérick

Target version:			
Resolution:			
Description I really like the new task feature. When checking a parent task, I see its subtask and completion %. And the global completion % is linked to the time estimate (if available). It would be nice to display this time estimate with the % completion. That would help understand the parent %, especially when a task has a high count of subtasks.

I propose to add 2 columns: total estimated time + total spent
