- Status changed from New to Closed
- Resolution set to Invalid

You always need to specify the correct rails environment (i.e. one that is actually configured). If nothing else is specified, the development environment will be used. Try this instead:

```
RAILS_ENV=production /usr/local/bin/ruby script/about
```

Maybe you should put that prominently in the bug reporting instructions, then, for those of us who are not Rails mavens. Bug reporting should be accessible to everybody, neh?
