

Redmine - Defect #7047

Git adapter very slow when a commit modifies a lot of files

Description			
<p>I have a Git repo with thousands of files modified in some commits. Repository index action is very slow (>20s).</p> <p>At first sight, it seems it's due to Redmine::Scm::Adapters::GitAdapter#revisions uses --raw option, which is not needed in all cases, at least not needed in Repository::Git#latest_changesets. It results in thousands of useless lines parsed after the shell-out.</p> <p>I'll have a look at that. I admit it's not a common use case, hence the priority.</p>
