Description

Similar to google-code's issuetracker, I would like to have a defaultDescription added to a Tracker (or Tracker-Project combination) where I can tell peopple what to fill in.

We have a lot of issue reports that state "xxxx doesn't work". Which is ofcourse useless.

I like the sample description google uses:

These should all be customfields ofcourse:

```
Chrome Version        : <Copy from: 'about:version'>
Other browsers tested:
  Add OK or FAIL after other browsers where you have tested this issue:
    Safari 5:
  Firefox 3.x:
      IE 7/8:
```

This is important:

```
URLs (if applicable) :

What steps will reproduce the problem?
1.
2.
3.

What is the expected result?

What happens instead?

Please provide any additional information below. Attach a screenshot if
possible.
```

Is duplicate of Redmine - Patch #2931: Templating for description of new tick...	**New**

History

#1 - 2010-12-31 21:02 - Chad Heuschober

+1 here, also noting this is a duplicate of [#2931](#) which does have a suggested patch.

#2 - 2017-02-04 01:42 - Go MAEDA

- Is duplicate of Patch #2931: Templating for description of new tickets by Tracker added

#3 - 2017-02-04 01:44 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Duplicate

Not implemented yet but closing as a duplicate of [#2931](#).
