Redmine - Feature #7091

Tree view of the project list / grouping projects

Description

Hello,

It will be nice if the project list (http://path_to_redmine/projects) is displayed as collapsible tree view. This does matter when there are many projects.

Another way to make the project list shorter would be project grouping based on the project hierarchy -- visually it would looks like issue lists, grouped by some field, assignee par example. This way the user may expand one project group only -- that one he wants to see. This could be saved in a cookie or some other way between sessions.

When there are few projects tree view may be annoyance. So it will be nice if the user may select what view of the projects he/she wants: the current simple list or tree view or project grouping. Par example:

- option in the user profile to permanently select preferred view
- options on projects list view to switch to another view

Ivan

This issue can be resolved by my Project Sections plugin:

- The plugin splits the default full project list into sections (similar to Wiki sections). This way you still get the full list, but grouped.
- Additionally, each section has it own page, i.e., a shorter project list. The plugin provides multiple ways to navigate to a section page:
    1. Through the jump box on the project list or section page.
    2. Through the project heading.
    3. By clicking on the section title or its part.

I'll try it for sure and I suppose that projects_tree_view plugin shall/may be discarded (the clone I use has some defects in collapse/expand tree function).
