Resolution:	Fixed		
Description			
Hi,			
We work with several branches on a git repo, but Redmine only seems to track changes from master branch. The problem is that our commit messages like: "Fixes #241 "... do not work if they are created on a "develop" branch for example. Redmine does not "see" these commit messages, therefore it can't mark the bug as fixed.			
This seems to be a bug implementation of issue #1406

Revision 5759 - 2011-05-12 14:11 - Toshi MARUYAMA

scm: git: add test of "latin_1_path_encoding" branch revisions with from revision in adapter test (#7146).

"latin_1_path_encoding" branch is straight line.

Revision 5760 - 2011-05-12 15:00 - Toshi MARUYAMA

scm: git: add test of revisions() in merged revisions in unit adapter test (#7146).

Git branch is a reference of specific revision.

Git branch is equivalent with Mercurial **heads**.

http://mercurial.selenic.com/wiki/GitConcepts?action=recall&rev=53#Branch_model

32ae898b7 in git test repository is a merged revision with two heads.
713f49446 and 4a07fe31b **were** in different branches before merged.
713f49446 and 4a07fe31b are descendants of 61b685fbe5.
4a07fe31b is a child of 61b685fbe5.
To get revisions from 713f4944648826f5 to master,
"git log" needs to return 4a07fe31b.

#6 - 2011-04-03 03:50 - Toshi MARUYAMA

Redmine calls "git log --all --since='YYYY-MM-DD'" to fetch new changesets.
at source:1.1.2/lib/redmine/scm/adapters/git_adapter.rb#L114.

If latest changeset in your database is "2011-03-30", Redmine calls "git log --all --since='2011-03-23'".

#7 - 2011-05-04 18:07 - Ling Li

I am curious: Do the commits you mentioned in [#8256](#) for ChiliProject also go to Redmine? I am confused by how these two projects progress --- would they share most of the new changes?
