Target version:	1.0.0 (RC)		
Resolution:	Fixed		
Description			
Currently, the user can preview description/notes by clicking "Preview" at the bottom of the page. I think that there are two problems with this functionality.			
<ul style="list-style-type: none">• The label "Preview" is too general... I expected to be previewing the whole ticket, not just the description.• The preview is displayed at a relative distance to the actual content.			
How about trying one of these:			
<ul style="list-style-type: none">• Display a full ticket preview.• Place the Preview link directly under the description, and also have the preview display there too.• Rename "Preview" to "Description Preview"

Revision 3623 - 2010-03-28 17:17 - Jean-Philippe Lang

Preview description if it was edited while updating an issue (#741).

History

#1 - 2009-11-16 15:30 - Phil Hord

As mentioned in [#2094](#), the preview is also missing any updates to the original description field.

I think the preview is intended to be used for verifying the wiki-text formatting. I think that is why the notes are the only thing shown in the preview window. However, the Description text should have its own preview "button" if this is the case.

#2 - 2010-03-28 17:18 - Jean-Philippe Lang

- Subject changed from *issues: description/note previews* to *Description preview while editing an issue*

- Status changed from *New* to *Closed*

- Target version set to *1.0.0 (RC)*

- Resolution set to *Fixed*

As of [r3623](#), description will be previewed if it was edited.

IMHO, previewing issue attributes doesn't make much sense so I close this ticket.
