

Redmine - Defect #7427

Use one xml schema per entity type

2011-01-24 19:05 - Andrey Bruggemann

Status: Closed	Start date: 2011-01-24
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: REST API	Estimated time: 0.00 hour
Target version:	Affected version:
Resolution: No feedback	

Description

Would be better if find (GET) and create/update (POST/PUT) methods use the same xml schema, for each entity type. For example, the xml schema for issue creation are:

```
<issue>
  <subject>Example</subject>
  <project_id>1</project_id>
  <priority_id>4</priority_id>
</issue>
```

But should be:

```
<issue>
  <subject>Example</subject>
  <project>
    <id>1</id>
  </project>
  <priority>
    <id>4</id>
  </priority>
</issue>
```

History

#1 - 2013-04-14 02:28 - Filou Centrinov

Category: REST API
Status: Feedback / Closed

The REST API for [issues](#) has been improved. It wasn't implemented as you proposed, but I think the current version could satisfy you. Can we close this issue?

#2 - 2013-04-14 10:20 - Toshi MARUYAMA

- Category set to REST API
- Status changed from New to Needs feedback

#3 - 2015-08-23 17:23 - Jan Niggemann (redmine.org team member)

- Status changed from Needs feedback to Closed
- Resolution set to No feedback
