Description

Seems like the version status could be expanded to use enumerations or the custom field class.

Right now version statuses are enumerated in the version model. Would like to be able to customize this like we can can customize Issue status.

For example set a version from 'open' to 'approved' to 'closed'. Or something similar. Or add a custom field to a version that it is approved.

History

So I realized that I can add a custom field to a version, but there are no journal entries showing the changes.

Still would like better control over the status though.

#2 - 2013-03-25 22:21 - Dipan Mehta

This functionality is now possible out-of-the-box using custom field of type "version".

This issue should be closed now.

As note-1, there are no journal entries showing the changes.

#4 - 2013-03-27 03:22 - Toshi MARUYAMA

- Subject changed from custom version status to journal for changing custom version status

#5 - 2013-10-14 11:55 - Jean-Philippe Lang

- Subject changed from journal for changing custom version status to journal for changing custom version status
