**Description**

Hello,
I have a redmine installation at work that works pretty well !
I have public projects and non public projects.
But now, i have set all my projects to non public because i have to add external users of my company.
These users are members of some projects but they don't have to see the others.
So, i can't let some projects "public" and this is not what i want beacause some projects have to be publics for my company but not for the external users ...
Is it possible to do this ? Having a Role or some roles without the public acces ?
Before entering my redmine installation, the user has to enter his login and his password to be identified ...
