

Redmine - Feature #806

Have wiki links display linked page title

2008-03-07 12:12 - Ale Muñoz

Description			
It would be über-cool to have wiki links (i.e: linked_page automatically display the linked page's title.			
DokuWiki has a similar feature.

What do you mean exactly by "page's title" ? The first heading of its content ?

#2 - 2008-03-10 08:27 - Ale Muñoz

Exactly.

Here is a patch implementing this feature, along with some tests.

#4 - 2010-06-01 12:28 - Vincent de Lau

I'd also like to see something like this. It would be nice to be able to have a 'title' that is different from the 'name'. The name has to adhere to strict conventions to allow it to be contained in URL's, but there should be no such need for title's.

Example:

I have a page 'vps1.example.org' which gets the name 'Vps1exampleorg'. I don't mind that that is the name that is being used internally, but it bothers me that this also appears in the HTML title and in links in the

Error executing the **child_pages** macro (With no argument, this macro can be called from wiki pages only) macro.

#5 - 2010-06-01 13:15 - Vincent de Lau

I've tried applying the patch (manually), but it doesn't seem to work (anymore). I'm not a Ruby programmer, so I can't assess the cause.
