

Redmine - Feature #8447

support for custom fields to be structured like description field

Description Specifically for long text custom fields I would like to have the ability to have them drawn in a way that does not distort the display of the overall issue. Currently putting in a long string there causes the display to squish the other columns. I would like to be able to have them added in the same manner as the description area. This would/could be drawn after the 'related to' section. e.g. a custom field name = Release Instructions, its type could be sectioned text. It would have a text box just like the description field with the field name displayed as a title. (using 1.0.4, waiting for 1.2.0)

History

#1 - 2011-05-26 22:16 - Terence Mill

related to [#8417](#) in terms of positioning fields.

The input type configuration shall be part of the global config, not like the issue form layout which is configurable per tracker, like described in [#8417](#)

#2 - 2011-12-07 12:44 - Harry Garrood

+1 - I would like to see this too

#3 - 2012-07-18 23:53 - Terence Mill

covered by Feature [#8417](#) "per tracker configurable issue form layout with preview"

#4 - 2017-02-12 03:38 - Go MAEDA

- Is duplicate of Patch #21705: Option for long text custom fields to be displayed using full width added

#5 - 2017-02-12 03:39 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Duplicate

Very similar feature was implemented by [#21705](#) for upcoming Redmine 3.4.0.

I am closing this issue as a duplicate of it.
