<b>Target version:</b>	
<b>Resolution:</b>	
<b>Description</b> Project Managers can currently add users and assign roles to them, but don't necessarily know all the permissions assigned to the role.  As descriptive as I can be with the role name, I'm still frequently asked what users will be able to do if they grant them a role on their project. It would be very helpful to have some way of displaying the permissions granted to a role for non-Administrators.  Perhaps a role to allow this feature would be helpful, though not really required in my case.
