Redmine - Defect #8556

sys/fetch_changesets feature un(der)-documented

2011-06-07 16:28 - Dave Abrahams

Status:	Closed		**Start date:**	2011-06-07
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Documentation		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Fixed		**Affected version:**	1.2.0

Description

The feature described in http://www.redmine.org/projects/redmine/wiki/RedmineRepositories doesn't work for me as prescribed. I get "Access denied. Repository management WS is disabled or key is invalid."

But of course I /have/ checked "Enable WS for repository management" (whatever that means --- what the heck does WS stand for?)

From looking at the error message I guessed that perhaps I needed to add "?key=<the API key>" to my URL, and that at least does not give me an error, but I can't really tell for sure that it's working. Is that what I'm supposed to do?

History

Yes, you can find an example here.

BTW, WS stands for "Web Service", I guess.

#2 - 2011-06-07 17:50 - Etienne Massip

- Status changed from New to Closed

- Resolution set to Fixed

Added a link to Rest_api, should do the job, feel free to "review" it.

#3 - 2011-06-07 18:16 - Dave Abrahams

The instructions *still* don't work unless I interpret trying to manually fetch changes by typing in the URL as trying to "make it an automatic task." The "?key=...." part is still needed.

Also, *please* replace the nonstandard abbreviation "WS" with what it stands for everywhere. It's just gratuitously confusing.

I confirm that, but it shouldn't, at least as I understand the whole authentication thing. I will check later if there is already a defect describing this behavior...

I won't do that since the "WS" term is used in application settings labels.

#5 - 2011-06-10 10:33 - Etienne Massip

- Status changed from Reopened to Closed

Ok, I fixed the documentation.

#6 - 2011-10-25 12:31 - Elijah Ennis
