Redmine - Feature #8643

Allow rdm-mailhandler with unknown-user=create to attach the user to a specific group instead of creating a "rightless" user

2011-06-17 18:47 - Heiko Wundram

Description

When rdm-mailhandler creates a new user through the "unknown-user=create" action, the user is basically rightless for any project that his mail is inserted into. I'd be spectacular if a new user created through "--unknown-user=create" is added to a (command-line-?)specified group immediately.

I've finished a small implementation of the requested functionality, which allows rdm-mailhandler.rb to accept a new parameter informing the system to put a new user into a specific group on creation. The attached patch implements just this.

It'd be nice if functionality like this could in some way or another be added to the tree.

- Status changed from New to Closed

- Resolution set to Duplicate

The same feature "--default-group" option was implemented by [#13340](#) (Redmine 2.3.0).
I close this issue as duplicate.

Thank you for submitting this.
