

Redmine - Defect #868

mainproject disapears from Jump-to-box when unmapping a subproject

2008-03-15 13:41 - Georg Leciejewski

Status:	Closed	Start date:	2008-03-15
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Projects	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:			
Description			
When mapping a subproject to a main project, the jump-to select box shows the according nesting. OK			
After unmapping this subproject from the main project the main project disappears from the select box.			
I only tested this with a single subproject.			

History

#1 - 2008-03-15 15:27 - Jean-Philippe Lang

The 'Jump to a project' box only shows the project you're a member of.
Because it displays the projects nesting, it will show the parent project if you're member of a child project.
