Description

I'd like an option to disable HTML email - just send plain text. This should be a relatively request, at least, since you're already sending plain+HTML.

This request should take form of a user preference.

I'm interested in this feature.

There's no such an option for now, but you can remove all the *.text.html.rhtml files in app/views/mailer/ if you really want to disable html emails.
