Description			
<p>I use the WebDav-Plugin to manage my documentes. With Redmine i can create a new document with characters(< > ? " : \ / *) that cant handle by windows.</p> <p>All i need is to add a "validates_format_of" in app/models/document.rb with regex <code>^([\<>\?": \\\/*]+)\Z/i</code>. The Regex filters the caracters(< > ? " : \ / *). If one of these found, we get an error.</p> <p>After line 30:</p> <pre>... validates_presence_of :project, :title, :category validates_length_of :title, :maximum => 60 # valid title (filename) for Windows validates_format_of :title, :with => /\A([\<>\?": \\\/*]+)\Z/i, :on => :save named_scope :visible, lambda { *args { :include => :project, :conditions => Project.allowed_to_condition(args.shift User.current, :view_documents, *args) } } ... </pre> <p>Source: http://en.wikipedia.org/wiki/8.3_filename#Directory_table</p> <p>This excludes the following ASCII characters: " * / : < > ? \ Windows/MSDOS has no shell escape character</p> <p>I hope u add this to core :)</p>

+1 to be able to use "PluginWebDav":projects/redmine/wiki/PluginWebDav with windows.

Its more a bug in context of the plugin than a feature.

- Status changed from New to Closed

Old issue + this could be done in the plugin I think
