

Redmine - Feature #898

add project specific css class to body tag

2008-03-20 00:29 - Georg Leciejewski

Description add the projectname(like in url) as css class to the body or wrapper element. This way one could apply a different layout for each project. I would need it to add another background image to each header, to customize the logo. But it could also be used to restyle other regions down the cascade.

This would be nice - i've had a couple of requests to add logo's for particular projects into the header area.

#2 - 2008-03-20 16:01 - Rocco Stanzione

- File *project_css.diff* added

+1. We don't even need a database field. The attached patch works for me, just create a public/stylesheets/<project identifier>.css.

#3 - 2008-07-31 12:42 - Bradley Whittington

- File *per_project_styling.patch* added

This has the cost of a `file_exists` check for every page load, which is not ideal.

My attached patch just adds an id to the body, which has the drawback of using a single, monolithic css file for styling, but benefits from not adding `file_exists` checks.

- Category set to UI

#5 - 2011-03-29 14:24 - Toshi MARUYAMA

- Estimated time deleted (0.50 h)

#6 - 2013-09-30 01:52 - Mischa The Evil

- Status changed from New to Closed

This has been implemented with [r12170 \(#14767\)](#).

body now includes the project *identifier*, prepended with project-, when you are navigating a project view. So for a project with an identifier `ecookbook` the CSS style would be `body.project-ecookbook`.
