Target version:	
Resolution: Fixed	
Description When editing a wiki site or an issue the attachments are not visible. I don't talk about the embedded view of attachments in the preview, but the files links itself which are only showed on the bottom of a published site, but not when editing. Often i upload files in a first step and then want to embed them i a second step i edit the site. Now i have to remind the names i had in the published site view before, because the attachment are not shown on the when editing, so i could just look at the bottom an copy paste the name to put it in between exclamation marks.
