

## Redmine - Feature #9184

### Inline issue editing within list view/custom query

2011-09-05 06:27 - James Robertson

<b>Status:</b>	New	<b>Start date:</b>	2011-09-05
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>		<b>% Done:</b>	0%
<b>Category:</b>	Issues	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>			
<b>Resolution:</b>			
<b>Description</b> It would be very helpful to be able to edit issues directly within the issue list view.  For example, if the Priority column is included in the issue list/custom query, as user could directly edit the priority of a particular issue, perhaps by double-clicking on the priority of that issue and being presented with an, inline, drop-down.  This would allow for quickly updating various aspects of several issues, without having to "go into" each - which can be quite painstaking process and a confusing one if several people are involved/watching at once.

Did you know there is a right-click contextual menu on issue list (and also in issue's subtasks and related issues lists)?

#### #2 - 2011-09-06 01:38 - James Robertson

Yes, thanks Etienne. Although I usually use it for bulk editing and hadn't thought about it for quick-edits on individual tickets.

Can you edit custom fields from the context menu though? If not, perhaps that should be a separate feature request, which might satisfy this one.

The other thing I like about inline editing is that it's better for when you're working with several people looking at the screen, because it's easy for them to see what is happening.

#### #3 - 2012-05-25 00:26 - Waleed Anbar

+1 for this feature. One of my most used features in Rally. Regarding editing custom fields from the context menu - it seems like this wouldn't work for most fields except List type.

#### #4 - 2014-12-05 05:39 - Mischa The Evil

- Has duplicate Feature #18564: Quick edit fields (for example estimate hours) in issue list added

#### #5 - 2015-04-02 15:47 - Steven Prutzman

Really would like this for the purposes of re-ranking a list. I use a custom field ("Rank") to order my list by priority. It is supremely time consuming to edit each ticket individually when priorities change.

Drag-and-drop Ordering would also be acceptable ([#8016](#) or [#9183](#)).

#### #8 - 2015-06-09 09:56 - Anders Wilson

+1, would be very useful for editing a quick comment per ticket while in list view, means less going to individual tickets/tabs (which is annoying in big web meetings with delays).

**#11 - 2020-12-16 16:20 - Ribald Drobens**

+1, especially for usability in general project management (no extra clicks / browser tabs upon editing custom fields).

**#12 - 2022-01-05 21:08 - Aleksandar Pavic**

+1, huh...

**#13 - 2022-09-27 11:09 - Michael Stanek**

We just released a plugin that enables users to **edit issues directly from the issue list**. On top of that, it adds priority colors, issue search, avatars and a lot more. Check the [RedmineX Inline Edit Issue List](#)
