Description

Hi,

I would like to update ticket by commit for related project(parent or child).

While check changesets.rb, I aware such code exists:

```
def find_referenced_issue_by_id(id)
  return nil if id.blank?
  issue = Issue.find_by_id(id.to_i, :include => :project)
  if issue
    unless issue.project &&
      (project == issue.project || project.is_ancestor_of?(issue.project) ||
       project.is_descendant_of?(issue.project))
      issue = nil
    end
  end
  issue
end
```

However ":include => project" condition seems to prevent following code.

Why don't you permit referencing changesets for related project's scm?

regards,

Takashi Okamoto
