Description			
At the moment it is only possible to hook on base layout, which affects all views. We would need a projects tree view hook, to enhance projects view via plugin.			

History

#1 - 2014-10-26 02:46 - Daniel Black

A view hook in render_project_hierarchy as a bottom (or top, I'm not fussy) of the loop would be ideal. to add text to the summary info of each project.

This would enable a plugin to present custom project summary information in a multiple projects view.

A range of plugins are possible like issue summaries, spent_time, activity trends/graphs, project commits, gantt time/resources current used/needed.

So: +1 from me.
