**Description**

In case search results are so many, it's pretty troublesome to move backward and forward along results.

In some cases, we hope to see these results not in descending but in ascending.  
But we have no way to reach the last page directly, so that we must continue to click the "next >>" link at the foot of the result's page.

And we also have to do the same to go back to the first page.

Since the results are ordering by event\_datetime, I think it's not easy to add pagination number like issue list page.

e.g.  
1 2 3 ... 20 [ ] » (1-25/389) | 1page: 25, 50, 100

I hope to add link(s) to first(last) page for search result, or switch search order desc and asc at least.

e.g.  
[First] << prev next >> [Last]

- Related to Feature #18631: Better search results pagination added

#### #2 - 2021-02-06 07:17 - Go MAEDA

- File pagination-link-4\_1.png added
- Status changed from New to Closed
- Resolution set to Fixed

In the latest version, the pagination link in the search results page allows you to directly go to the first page or last page. Probably it was changed in [r11026](#).

I am closing this issue.
