

Redmine - Feature #10009

hide empty diffs after a merge in SVN

2012-01-17 11:03 - ed boel

Description When doing a merge in svn also the unchanged files are being updated because the mergeinfo is being updated. This results that all files are being shown in the revision view. But when clicking on the diff buttons, it will show nothing. It would be nice to show the diff buttons only next to the files that actually are changed.
