Description	
<p>Hello.</p> <p>We are running Redmine 1.3.0 on Ruby 1.9.2 now and have found solution with encoding in templates. It's just use mysql2 adapter(gem version 0.2.7) instead of mysql.</p> <p>I've described how to run all in my blog. http://brainstorm.name/en/node/466.html</p> <p>We've not added ImageMagick support to our redmine distribution just because we don't need it.</p> <p>So, why this installation way does not present in Redmine wiki and install howto?</p>

History

#1 - 2012-02-23 20:06 - Etienne Massip

- Category set to Documentation
- Target version set to 1.4.0

Because RM 1.3 is not compatible with Ruby 1.9.

Thanks for the information, though, we will update Install wiki page with version:1.4.0 release.

#2 - 2012-02-23 20:09 - Etienne Massip

- Subject changed from *Successfully started redmine on ruby 1.9.2* to *Update installation doc on release*

And remove target version on release?

#3 - 2012-04-14 11:12 - Jean-Philippe Lang

- Status changed from *New* to *Closed*
