Hi,

I have this error when I access a specific project:

ActionView::TemplateError (undefined method `<>=' for nil:NilClass) on line #3 of app/views/projects/settings/_members.rhtml:

```
1: <%= error_messages_for 'member' %>
2: % Roles = Role.find_all_givable
3: members = @project.member_principals.find(:all, :include => [:roles, :principal]).sort %>
4: 
5: <div class="splitcontentleft">
6: <% if members.any? %>

app/models/member.rb:53:in `<>='
app/views/projects/settings/_members.rhtml:3:in `sort'
app/views/projects/settings/_members.rhtml:3:in

`_run_rhtml_app47views47projects47settings47_members46html_locals_members_object_tab'
app/views/common/_tabs.rhtml:24:in `\_run_rhtml_app47views47common47_tabs46html_locals_object_tabs'
app/views/common/_tabs.rhtml:23:in `each'
app/views/common/_tabs.rhtml:23:in `\_run_rhtml_app47views47common47_tabs46html_locals_object_tabs'
app/helpers/application_helper.rb:204:in `render_tabs'
app/views/projects/settings.rhtml:3:in `\_run_rhtml_app47views47projects47settings46html'
```

Rendering /data/www/redmine/public/500.html (500 Internal Server Error)

I have found this old issue: [http://www.redmine.org/issues/4563](http://www.redmine.org/issues/4563), but executing:

```
ruby /var/www/redmine/script/runner -e production "Member.find(:all, :include => [:roles, :principal]).select {[m] m.roles.empty? || m.principal.nil?}"
```

do not return anything.

Am I doing something wrong or is this actually a bug?

If this is a DB problem, can you point me how to fix it?

Thanks.

Associated revisions

Revision 8863 - 2012-02-12 15:54 - Jean-Philippe Lang

Fixed potential error when sorting members without role (#10053).
Forgot to mention my Redmine version: 1.3.0, I can't see how to update "Affected version" field...

Having the same issue only on certain projects. I have over 100 projects on redmine clustered over 3 mongrel servers with an apache load balancer in front. Most projects worked but some return this error after upgrading to 1.3.0

I solved it removing all user of the project direct from DB.

Please give details according to [[SubmittingBugs]].

And try to reproduce with no plugin installed.

Hi,

Etienne, here you have more info:
- Database Version: Mysql 5.1.49
- Ruby Version: 1.8.7
- Rails Version: 2.3.5
- Redmine Version: 1.1.2 (I said it was 1.3.0, but I was looking at Help tab, and it was a redirection to redmine.org, I didn't notice it :S)

I assume that the error stack trace is what I already posted.

About plugins I can't test it now (there's a lot of people working on this Redmine installation right now), but I'm preparing a test installation and I will try to reproduce the same error.

Finally I tested it without plugins, and I get the same error.
Increasing log to debug did not help either. I just see the last SQL query, but I don't think is important, because it's run by 'project.member_principals.find' function, and what is really failing here is the data handling (I guess).

Any ideas?

Thanks.
You may have an inconsistent member (e.g. member without roles) in your database and the sort method raises an error. This should be fixed by r8863.

#9 - 2012-02-12 19:22 - Jordi Clariana

After applying the patch the error vanished and no further misfunction detected.

This is resolved to me.

Thanks.

#10 - 2012-02-12 20:43 - Jean-Philippe Lang

- Status changed from Confirmed to Resolved
- Target version set to 1.3.2

Thanks for the feedback.

#11 - 2012-03-05 13:46 - Jean-Philippe Lang

- Subject changed from ActionView::TemplateError when accessing the settings of a project to undefined method `=>` for nil:NilClass when accessing the settings of a project

#12 - 2012-03-05 13:46 - Jean-Philippe Lang

- Status changed from Resolved to Closed

Merged.
