Resolution:			
Description			
Email addresses entered in Wiki pages are corrupted. Appears a mailto link is partly built.			
Using revision 676			
Example:			
test@test.com "> test@test.com			

History

#1 - 2007-08-29 16:15 - Jean-Philippe Lang

Could you give more details about your example. Is it what you typed ? What did you expect and what did you get ?

If I enter [test@test.com](#), I get a valid mailto link.

#2 - 2007-08-29 16:41 - Brian DeGregorio

Thought maybe it was the tables so put an email outside the table too. Will attach screen shot of the preview page, but saved page also shows the problem.

Typed in wiki editor:

Test Page

_.Name	_.Title	_.Email	_.Phone	_.IM
First LastName	President	test@test.com		test@hotmail.com
Other Name	Inspector	test@test.com		

[test@test.com](#)

#3 - 2007-08-29 17:34 - Jean-Philippe Lang

I can't reproduce. Your example works fine for me. Could you post the corresponding rendered html ?

#4 - 2007-08-29 18:46 - Brian DeGregorio

```
<div class="wiki">

  <h1>Test Page</h1>

  <table>
    <tr>
      <td> _.Name </td>
      <td> _.Title </td>
      <td> _.Email </td>

      <td> _.Phone </td>
      <td> _.IM </td>
    </tr>
```

```

        <tr>
          <td> First LastName </td>
          <td> President </td>

          <td> <a href="mailto:<a
href="mailto:test@test.com">test@test.com</a>&
quot;><a
href="mailto:test@test.com">test@test.com</a>&
lt;/a> </td>
          <td>&nbsp;</td>
          <td> <a href="mailto:<a
href="mailto:test@hotmail.com">test@hotmail.com</
a>"><a
href="mailto:test@hotmail.com">test@hotmail.com</
a></a> </td>
        </tr>

```

```

        <tr>
          <td> Other Name </td>
          <td> Inspector </td>
          <td> <a href="mailto:<a
href="mailto:test@test.com">test@test.com</a>&
quot;><a
href="mailto:test@test.com">test@test.com</a>&
lt;/a> </td>

```

```

          <td>&nbsp;</td>
          <td>&nbsp;</td>
        </tr>
      </table>

```

```

    <p><a href="mailto:<a
href="mailto:test@test.com">test@test.com</a>&
quot;><a
href="mailto:test@test.com">test@test.com</a>&
lt;/a></p>

```

#5 - 2007-08-29 18:49 - Brian DeGregorio

Is RedCloth what performs that conversion? I tried updating it but it didn't effect the problem.

#6 - 2007-08-29 18:50 - Brian DeGregorio

Forgot to paste this in. I'm running RedCloth v3.0.4

#7 - 2007-08-29 19:06 - Jean-Philippe Lang

I'm also using RedCloth 3.0.4

RedCloth shouldn't turn mail adress into mailto link.
In my case:

```
RedCloth.new("test@test.com").to_html
```

```
=> "<p>test@test.com</p>"
Can you do this test ?
```

Mailto links are generated by the auto_link Rail's helper

Here's the piece code in the app:
auto_link(RedCloth.new(text, [:hard_breaks]).to_html)

In your case, it looks like mailto links are generated twice.

#8 - 2007-08-30 11:28 - Brian DeGregorio

RedCloth test works

```

irb(main):009:0> RedCloth.new("test@test.com").to_ht
ml
=> "<p>test@test.com</p>"

```

Rails test works

```
irb(main):013:0> auto_link(RedCloth.new("test@test.com%quot;,  
[:hard_breaks])).to_html)  
=> "<p><a  
href=\"mailto:test@test.com\">test@test.com</a>  

```

#9 - 2007-08-31 13:07 - Brian DeGregorio

What versions of Ruby, Rails, and RedCloth are you running?
I just tested the same email address on the demo site and it worked correctly.

#10 - 2007-08-31 13:50 - Brian DeGregorio

I'm using Ruby v1.8.5, Rails v.1.2.3, and RedCloth v3.0.4.

#11 - 2007-08-31 14:01 - Jean-Philippe Lang

Exactly the same as you.

I get the same result as you if I type in the wiki:
test@test.com
(the full html mailto link), but it's ok if I just type
test@test.com

I can't see why the mail adress is turned twice into link in your case.
What happens with regular html link ? For example, what do you get if you type <http://test.com> ?

#12 - 2007-08-31 17:04 - Brian DeGregorio

URLs address in the wiki page display correctly.

```
<a href="http://www.test.com">http://www.test.com</a>
```

#13 - 2007-09-12 12:02 - Brian DeGregorio

Fixed when I updated to [r724](#).

Thanks for resolving this.
