<p>If you want to display a specific text instead of the URL, you can use the standard textile syntax:</p> <p>"Redmine web site":http://www.redmine.org</p> <p>It would be great if this was possible with the internal Redmine links. Example:</p> <p>"main.c":source:trunk/main.c</p>

This is really important for me also as i like to have links in wiki to repository. This is more or less essential as the repository reflects the core of knowledge created, which of course is internal.
